

Dot Maps – Dots are placed on the map to represent an **event** – these are great to show **distribution**

U.S. Colleges and Universities

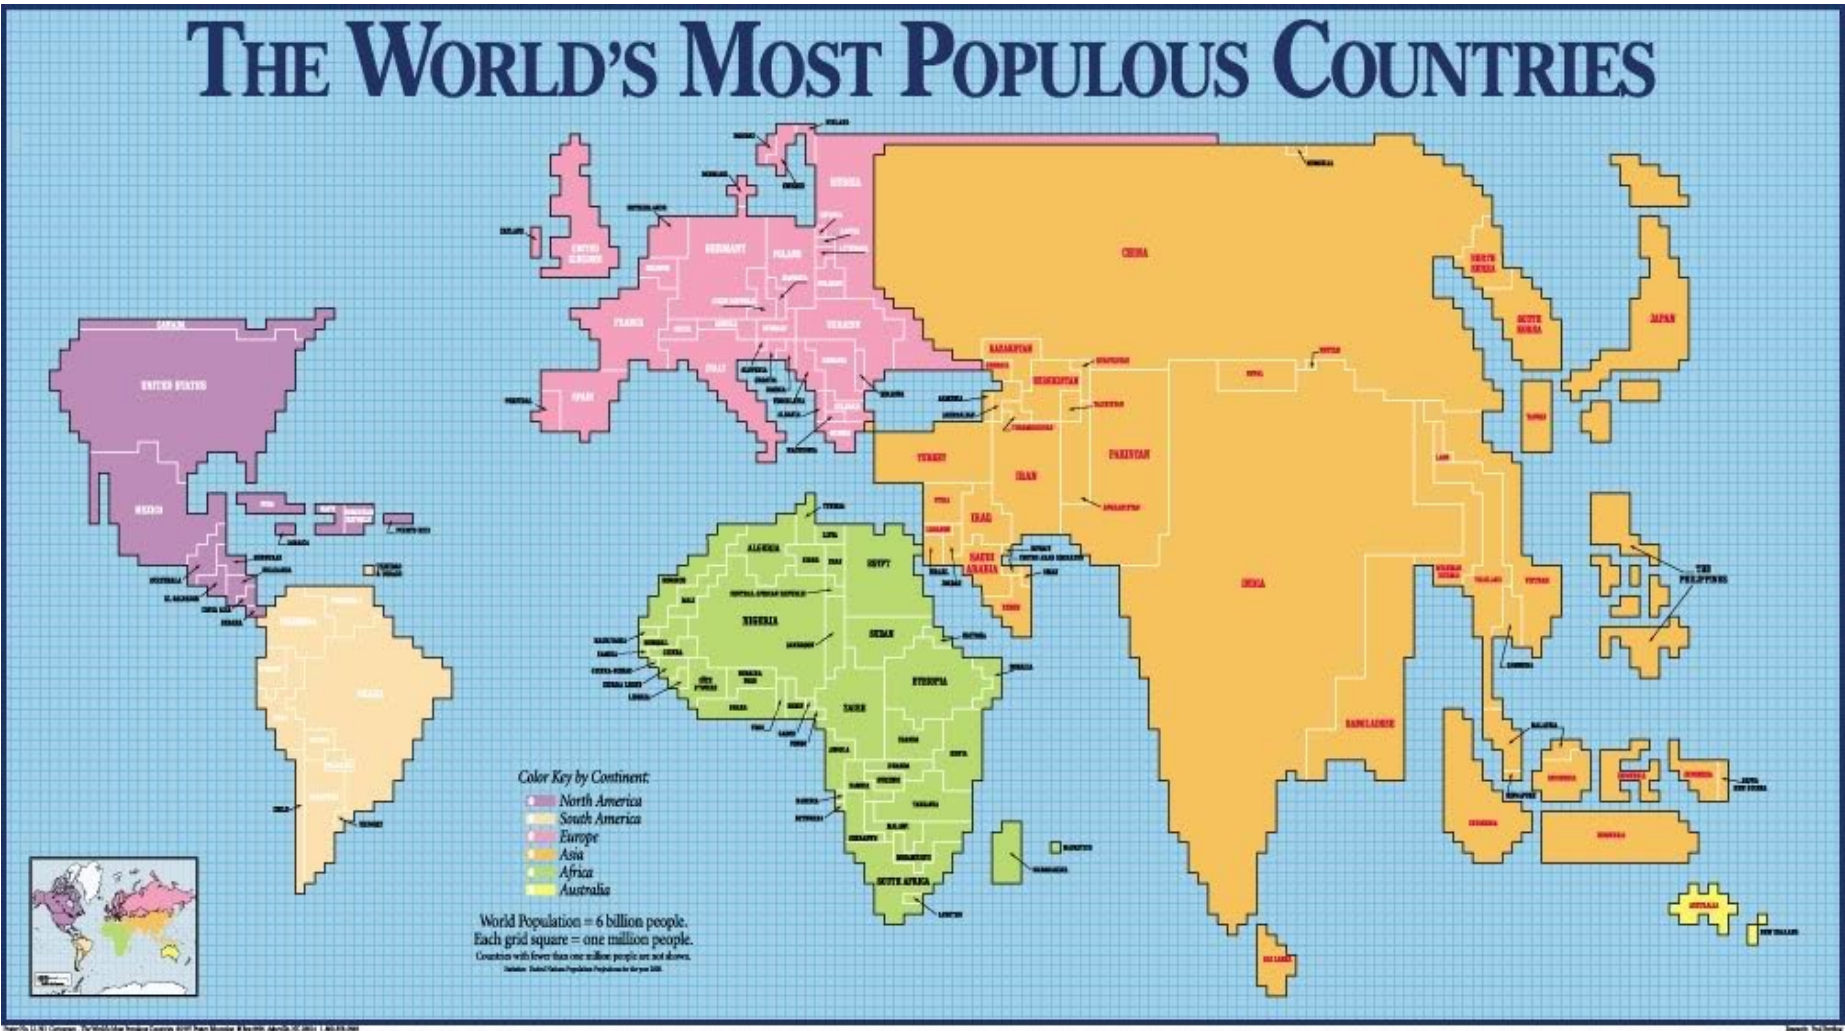

Cartograms – The size of a location is based on a particular defined characteristic – **distortion** is evident!

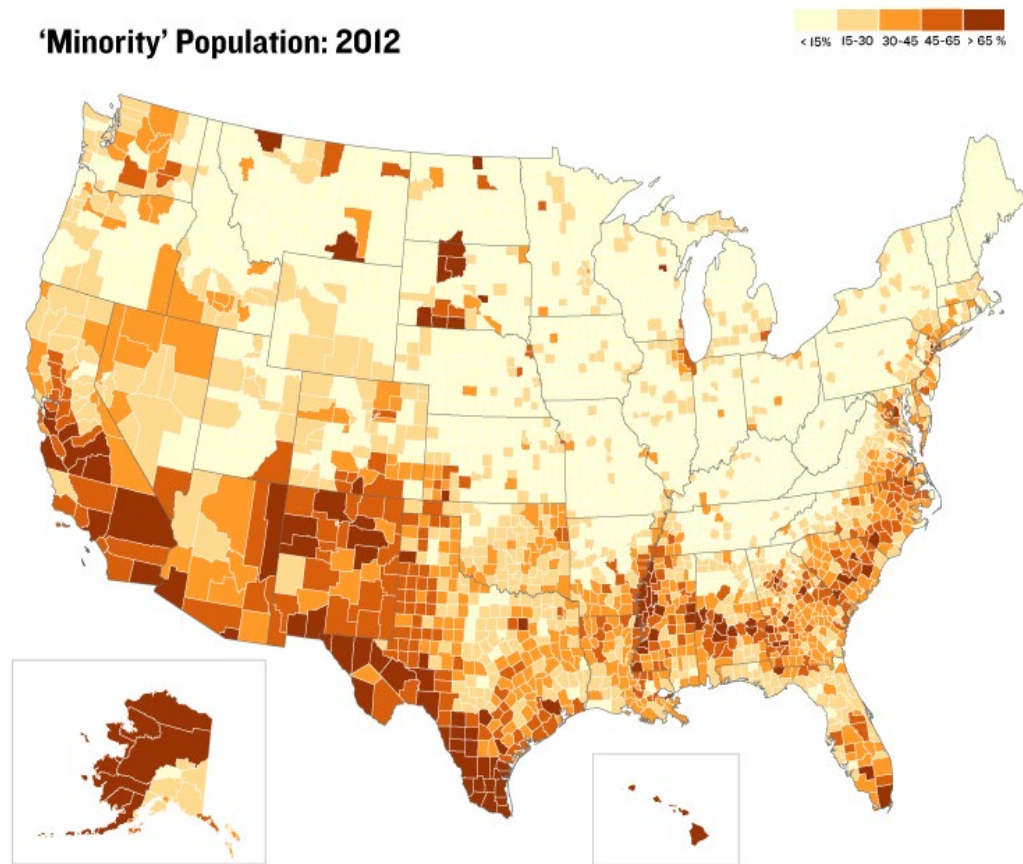

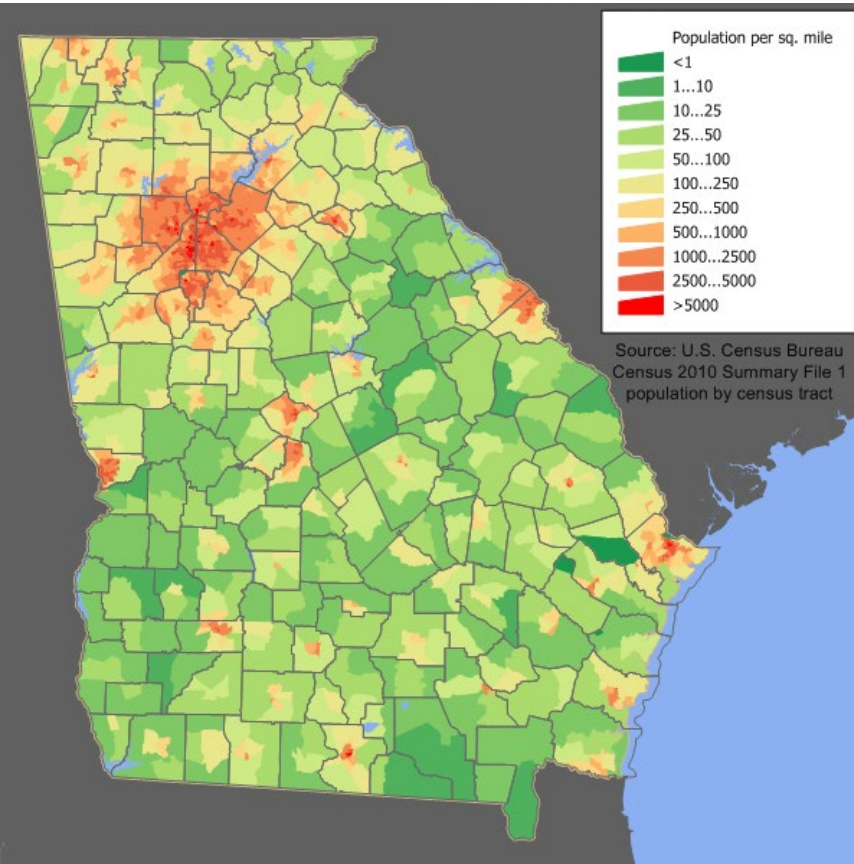

Cartograms – The size of a location is based on a particular defined characteristic – **distortion** is evident!

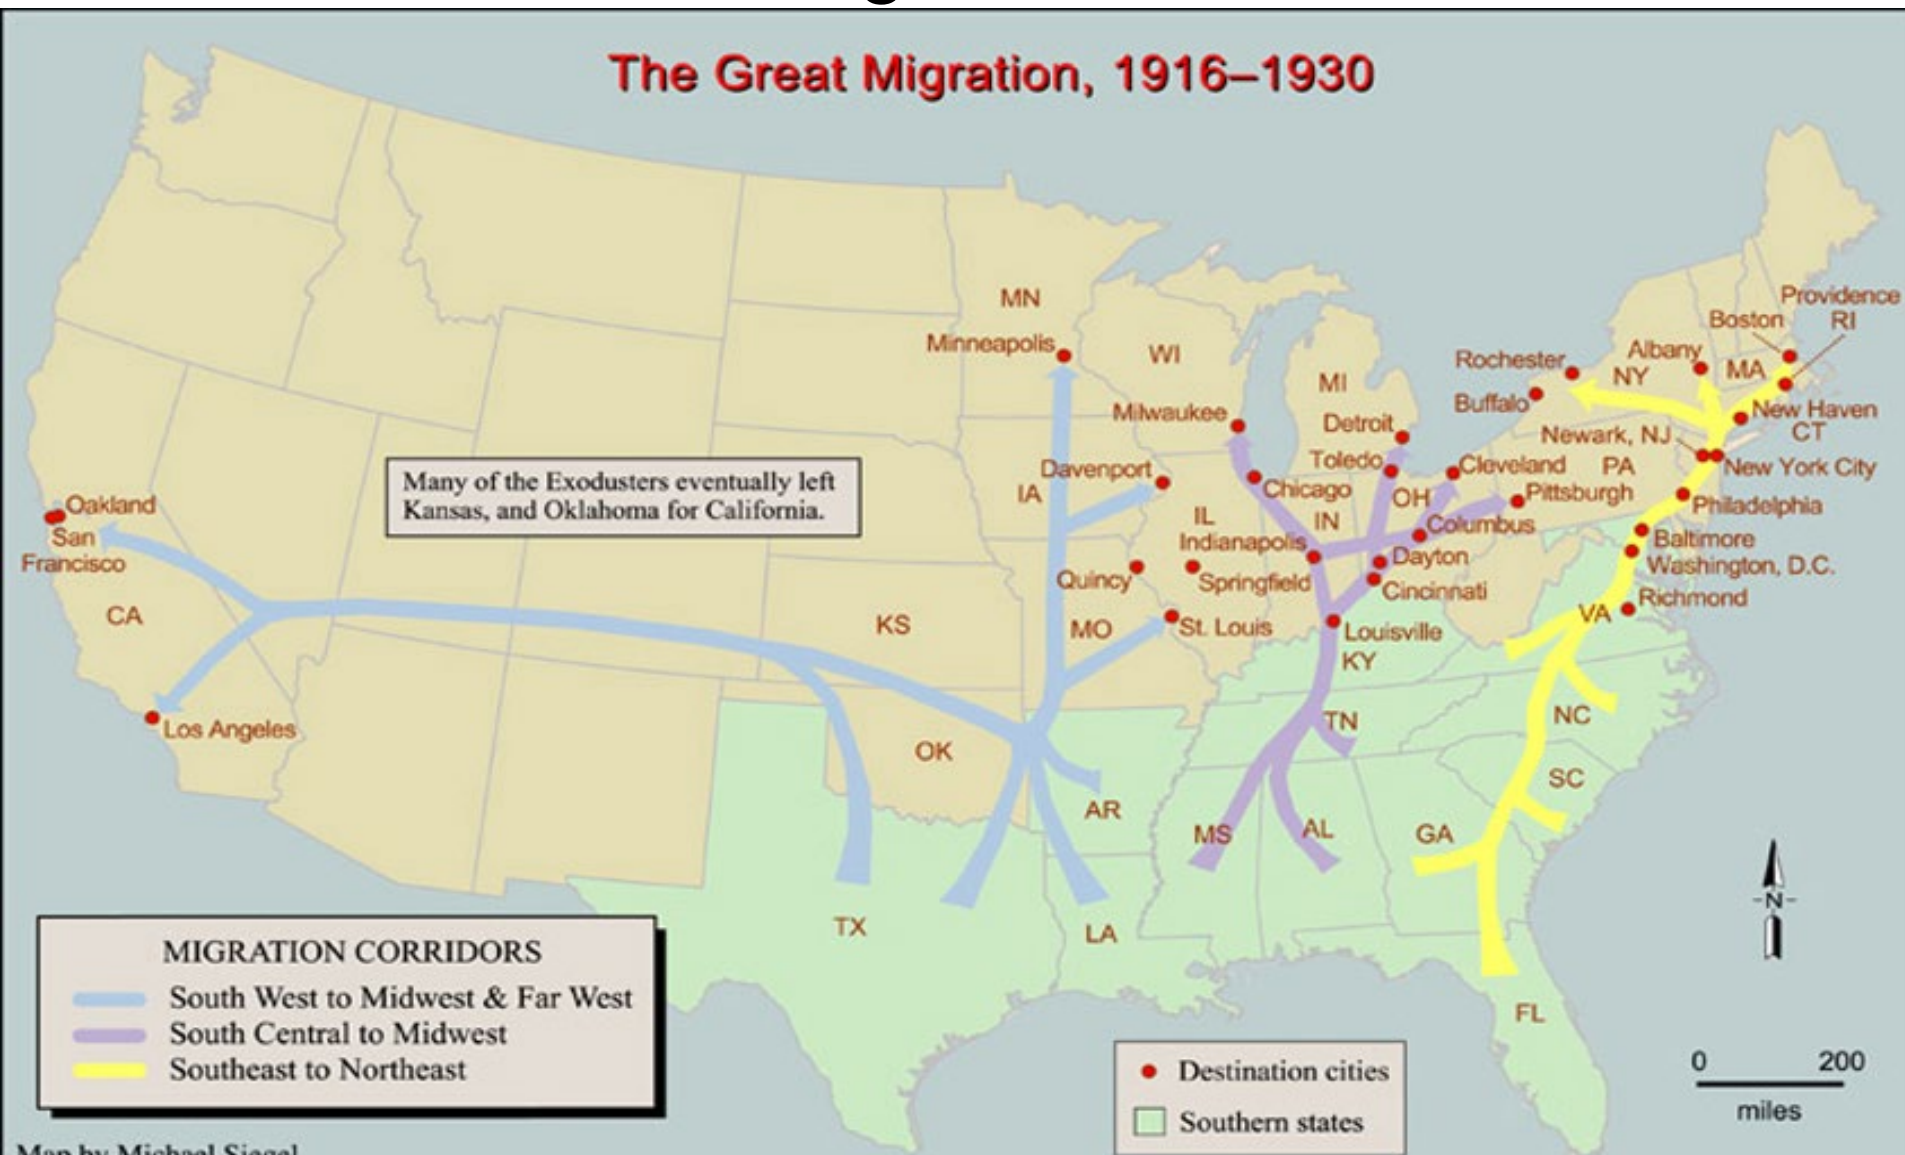

THE WORLD'S MOST POPULOUS COUNTRIES

Choropleth Maps – Each unit area is **shaded** or **colored** to suggest magnitude or intensity of the event.

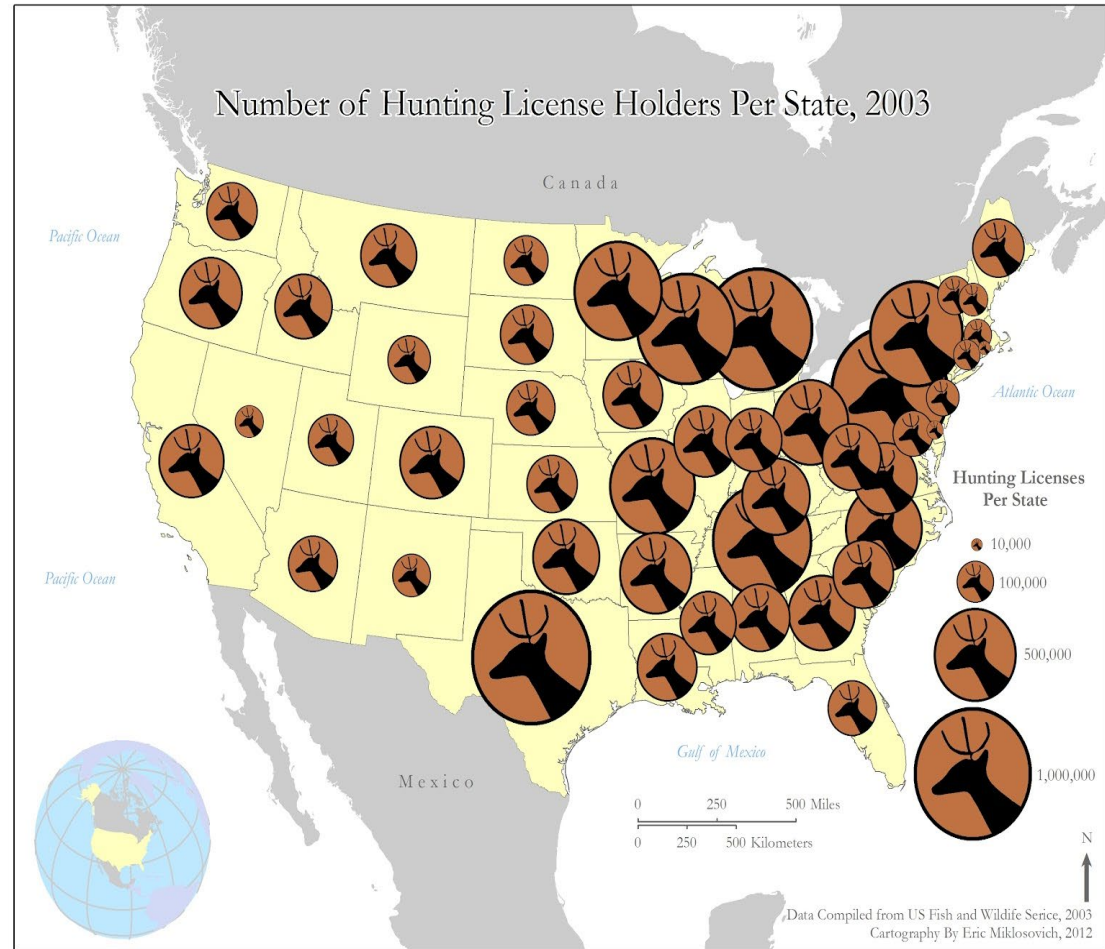

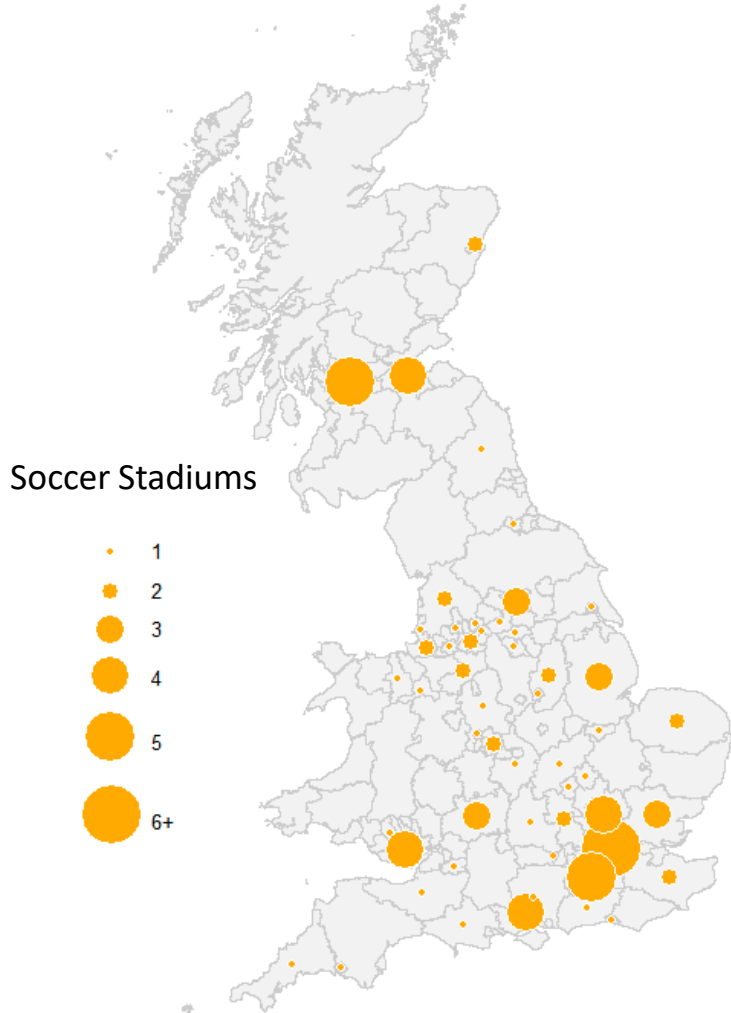

Flow Maps – Map that shows **movement** often using arrows.

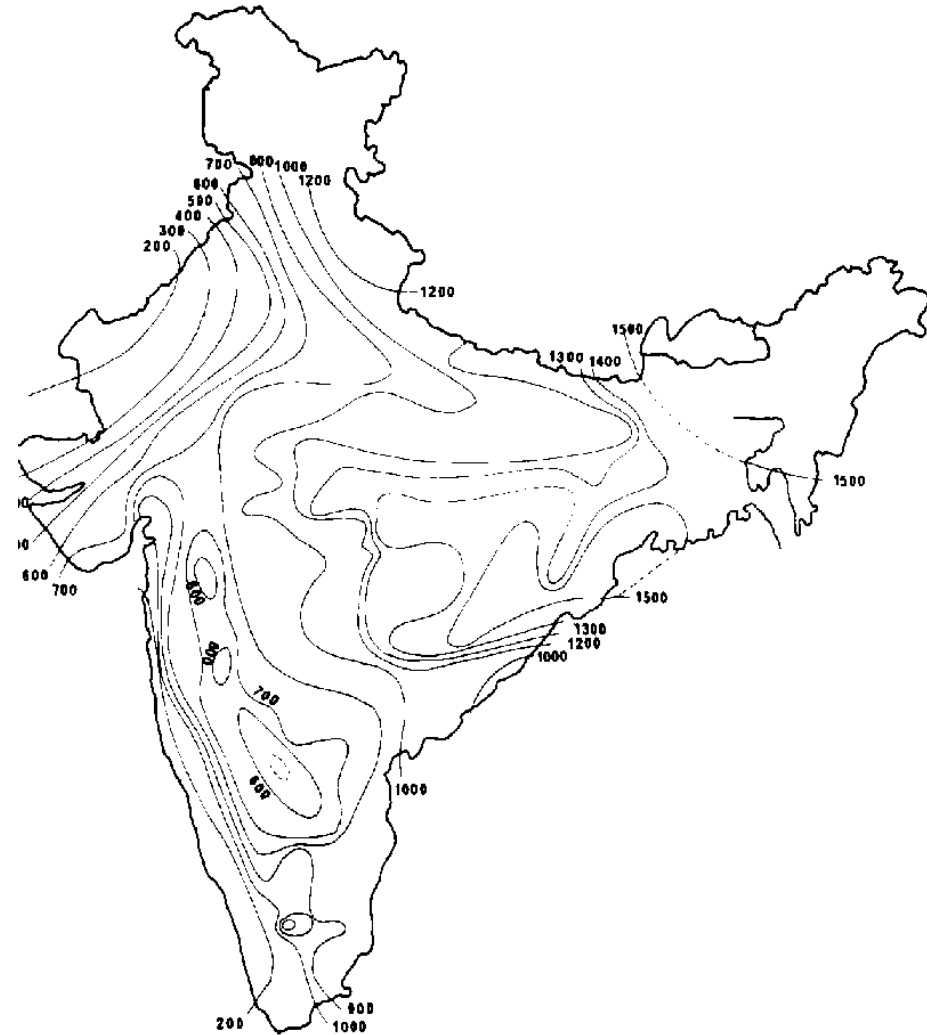

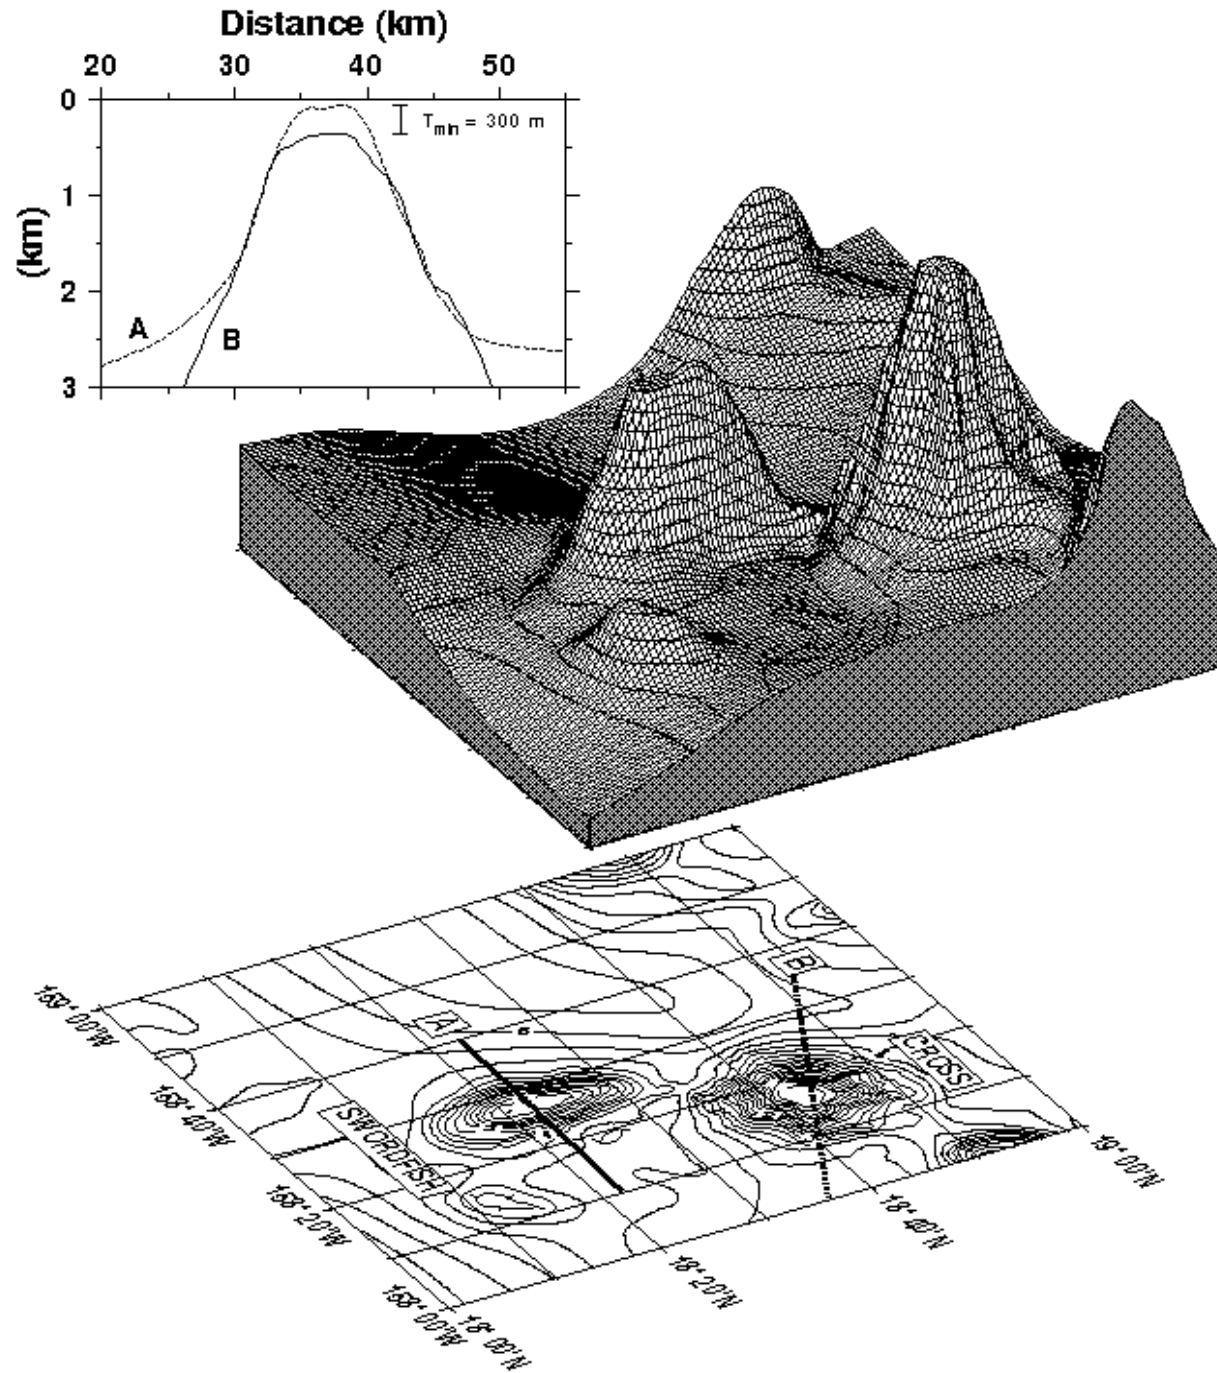

Proportional Symbol Maps – Similar to dot maps

– the size of the dot grows with **increased** value.

Isoline Maps – Uses lines to show places where values are **equal**

In an Isoline map the closer the lines are, the steeper the elevation change.

See how this landscape is portrayed from a contour standpoint and what it looks like in actuality.

Mental Maps – Map formed from knowledge and experience within each person. Unique for every situation.
